

Yugasakthivel K

Data Science Professional

Aspiring data scientist with hands-on experience in machine learning, data analysis, and visualisation. Currently working as a Data Science Intern at Gradtwin, bringing analytical rigour and technical expertise to complex data challenges. Passionate about transforming raw data into actionable insights that drive business decisions.

Professional Experience at Gradtwin

Role & Duration

Data Scientist

July 2025 – Present

Chennai, Tamil Nadu

Working with cutting-edge data science technologies to deliver meaningful business insights and predictive models for diverse projects.

Key Responsibilities

- Collecting, cleaning, and preprocessing large datasets using Python libraries including Pandas and NumPy
- Performing comprehensive Exploratory Data Analysis (EDA) to identify trends, correlations, and anomalies in complex datasets
- Building and evaluating machine learning models for regression and classification problems
- Creating interactive data visualisations using Matplotlib and Seaborn to communicate findings effectively
- Collaborating with senior data science team members to optimise workflows and present actionable insights to stakeholders

Technical Skills & Expertise

Programming Languages

Proficient in Python for data manipulation, statistical analysis, and machine learning implementation. Strong foundation in writing clean, efficient code for data science applications.

Data Science

Expertise in end-to-end data science workflows including data collection, preprocessing, exploratory analysis, model building, and evaluation using industry-standard methodologies.

Machine Learning

Hands-on experience with supervised learning algorithms including regression and classification models. Skilled in model evaluation and optimisation techniques.

Data Analysis & Visualisation Toolkit

Comprehensive technical proficiency across the modern data science stack, enabling effective data manipulation, analysis, and communication of insights through compelling visualisations.

Pandas & NumPy

Expert-level data manipulation and numerical computing capabilities. Utilise these libraries for efficient data cleaning, transformation, and preprocessing of large-scale datasets.

Exploratory Data Analysis

Strong analytical mindset for identifying patterns, trends, and anomalies. Employ statistical techniques and visual methods to extract meaningful insights from raw data.

Matplotlib & Seaborn

Create sophisticated, interactive visualisations that tell compelling data stories. Skilled in designing charts, graphs, and dashboards that make complex data accessible to stakeholders.

Microsoft Excel

Advanced Excel proficiency for data analysis, including pivot tables, formulas, and data visualisation. Certified in data analysis using Excel for business applications.

Educational Background

Bachelor of Technology Information Technology

**Sri Balaji Chockalingam Engineering College,
Arni**

June 2022 – August 2026

Pursuing a comprehensive education in Information Technology with specialisation in data science and machine learning. Building strong foundations in computer science fundamentals, algorithms, and modern software engineering practices.

Throughout my academic journey, I have focused on developing practical skills that bridge theoretical knowledge with real-world applications. My coursework and projects have equipped me with a solid understanding of data structures, algorithms, database systems, and statistical methods essential for a successful data science career.

Professional Certifications

1

Cancer Image Detection With PyTorch

Part 3 iBest Workshop – Advanced deep learning certification focusing on medical image analysis using PyTorch framework for cancer detection applications.

2

Tata Group Data Visualisation

Job Simulation: Empowering Business with Effective Insights – Practical experience in creating impactful visualisations for business decision-making.

3

Data Analysis with Microsoft Excel

Introduction to Data Analysis using Microsoft Excel – Foundational certification in Excel-based data analysis techniques and methodologies.

4

Chatbot Development

Chatbot using Chatfuel certificate – Expertise in building conversational AI solutions and lead generation messenger chatbots using the Chatfuel platform.

Data Science Project Workflow

A systematic approach to delivering data science solutions, from initial data collection through to actionable insights and model deployment.

Data Collection & Cleaning

Gather data from multiple sources and perform rigorous cleaning and preprocessing to ensure data quality and consistency.

Exploratory Analysis

Conduct comprehensive EDA to understand data distributions, identify patterns, and discover relationships between variables.

Model Development

Build and train machine learning models using appropriate algorithms, feature engineering, and hyperparameter tuning techniques.

Evaluation & Insights

Assess model performance using relevant metrics, create visualisations, and communicate findings to stakeholders effectively.

Key Competencies

Technical Skills

- Python programming for data science applications
- Machine learning model development and evaluation
- Statistical analysis and hypothesis testing
- Data visualisation and storytelling
- Database querying and management
- Version control and collaborative development

Professional Attributes

- Strong analytical and problem-solving mindset
- Excellent collaboration with cross-functional teams
- Clear communication of technical concepts
- Attention to detail in data processing
- Continuous learning and adaptability
- Results-oriented approach to project delivery

My combination of technical expertise and soft skills enables me to deliver high-quality data science solutions whilst working effectively within team environments. I am committed to staying current with emerging technologies and best practices in the rapidly evolving field of data science.

Connect for professional networking and opportunities

I welcome opportunities to discuss data science roles, collaborate on interesting projects, or explore how my skills can contribute to your organisation's success. Feel free to reach out through any of the channels above.

Career Objectives & Aspirations

As an emerging data science professional, I am passionate about leveraging data to solve real-world problems and drive business value. My current role at Gradtwin has provided invaluable hands-on experience in the complete data science lifecycle, from data preprocessing to model deployment.

I am actively seeking opportunities to expand my expertise in advanced machine learning techniques, deep learning, and big data technologies. My goal is to contribute to innovative projects that push the boundaries of what's possible with data whilst continuing to develop my skills in a collaborative, learning-focused environment.

With a strong foundation in Python, machine learning, and data visualisation, combined with practical industry experience and relevant certifications, I am well-positioned to deliver meaningful contributions to data-driven organisations. I am particularly interested in roles that offer mentorship, challenging problems, and the opportunity to work with cutting-edge technologies in domains such as healthcare, finance, or technology.

📌 **Open to Opportunities:** I am currently exploring full-time data science positions and exciting internship opportunities with organisations that value innovation, continuous learning, and data-driven decision-making. Let's connect and explore how we can work together!
